

# Seamlessly Integrate Data and Systems Across Your Enterprise

Your people rely on a growing number of data sources, applications and business systems that weren't designed to work together, both cloud and on-premise. Building custom integrations to connect them up can be technically challenging, expensive to execute and difficult to support.

You probably face data quality issues due to human error or because these various applications handle data in different formats and transaction cycles. This can lead to a lot of manual rework negatively impacting business outcomes and customer satisfaction.

**PA Streams will connect your cloud and on-premise applications and data sources in a simple, secure and scalable way.**

**Fast, easy, flexible.  
Low code – no code**

At-a-glance understanding of the data journey

Easy to build up the flow and evolve the complexity

Common connectors used across disparate use cases

Route data in multiple parallel paths with error handling

## Improve Data Quality Across Applications

### Clean and Transform Data

As the data flows through the stream in batch or real-time, you can apply transformations, clean the data and re format it to suit the receiving system's requirements.

#### Examples:

Integrate timesheets into billing.

Integrate 3rd party purchasing into your finance system.

Sales data into your purchasing system

### Handle Exceptions

You can handle errors automatically by creating business rules for specific conditions or notifying people when rules are broken, thresholds are breached, or offending events are identified.

Payroll to your banking system

Employee expenses into your finance system

Expose suspicious data events across your payment control systems.

### Better user experience

PA Streams includes a health board giving a real-time view into your process health. Get exception alerts, see trends and identify bottlenecks faster than ever before.

Asset data into your finance system

Trading data into your billing system

Identify data anomalies and exceptions

## Get Started with Your First Stream

PA Streams is delivered on a pay-per-stream model giving you fast time to value with a low upfront investment. You can start with one stream and scale your integrations across the enterprise as your needs grow. Our team of expert consultants can help you design your streams, or we can train members of your team to build their own integrations on the platform.
