

Enhance the Power of Infor Sunsystems

OVERVIEW

The Professional Advantage Infor SunSystems suite brings additional levels of internal control and good governance to your organisation through implementing and automating best practices in key business process functions. Our solution set gives you a rapid ROI through the introduction of smart end-user functionality, high performance and levels of integration not available in other solutions.

Our suite encompasses the Office of Finance core functions:

- Payments & remittances
- Bank statement reconciliation
- Credit control
- Invoicing
- Spend control
- VAT Returns
- Consolidation of data

INTEGRATION NOT INTERFACE

The incomparable uniqueness of our portfolio, is our seamless, native integration to Infor SunSystems. They have been designed for Infor SunSystems and sit within the same SQL database, which other modules do not do.

The benefits of seamless integration include real time access and visibility of SunSystems data structures and records, such as Business Units, Chart or Accounts and Analysis Codes. There is no duplication of data that is available in SunSystems, and when a record is created or amended in SunSystems, this is immediately understood in the Professional Advantage Solution. This reduces administration effort and gives users a single source of truth as they work through the day. Further to this, the integration layer offers real time transaction posting to the SunSystems ledgers with no need to build or spend money maintaining complex interfaces or process intermediary files. Validation using SunSystems rules and data ensures data accuracy.

What our portfolio will give you is trust in your data, trust in your decisions and trust in your insights. This is what makes the Professional Advantage Infor SunSystems suite completely different.

“We strive to make a great product like SunSystems even greater.”

“Infor and Professional Advantage have had a long and successful history working closely together, as a strategic solution partner they have provided significant value and business benefit to our customers and continue to offer extended business solutions that are complimentary to Infor SunSystems. We continue to work together to drive forward an innovative agenda for our customers and we look forward to doing so into the future”

SIMPLE, SMART AND INTUITIVE

Cash Management

Drives down administration, improves data integrity and eliminates duplicate transaction handling. These tools are guaranteed to lower your transaction handling costs and improve your productivity.

Bank Reconciliation

Powerful & dedicated bank statement management & automatic reconciliation

Electronic bank statement processing enables daily reconciliation, handles multiple bank accounts with user definable matching criteria and auto creation of bank transaction balancing journals e.g. fees.

B4B Payments & Remittances

Simple, secure electronic bank transfers

B4B is the interface between your payables solution and your bank(s), streamlining and standardising payment processing across your entire organisation. Automatically email the payment remittances to your suppliers from Infor SunSystems.

It increases efficiency, mitigates risk, improves control giving you full visibility over your entire bank payment process.

Credit & Billing Management

Unrivalled credit management encompassing invoicing through to debt collection.

Collect

Debtor Management

Provides companies with unparalleled credit management and debt collection functionality. Thorough analysis of debtor days and cash flow, close monitoring of debtors and the ability to track collections are key benefits quickly delivered by Collect. All this means that you can reduce Days Sales Outstanding and improve cash flow, while minimising collection costs.

Contract & Services Billing (CSB)

Ad-hoc contract & recurring invoicing billing

Addresses recurring contract invoicing, recurring service invoices and ad-hoc invoices. It delivers advanced functionality that works together with your business processes to remove manual tasks and increase billing data accuracy and speed.

Specialist Solutions

Flexible ad-hoc reporting over your SunSystems and iPOS data, data aggregation and Making Tax Digital.

Advanced Inquiry

Flexible ad-hoc reporting

Offers the most powerful ad-hoc inquiry functionality for interrogating SunSystems ledgers and iPOS procurement data. The drill down and around features give users unparalleled benefit and the ability to track the requisition order to receipt to invoice lifecycle. User driven, flexible real time enquiries at all levels.

PAMTD

Making Tax Digital Easy

PAMTD automates the link between Infor SunSystems and HMRC. The solution enables Infor SunSystems to export data to PAMTD avoiding the need to re-key data and the risk of errors. It also maintains the link between the data provided to HMRC and the source transactions. The key benefit of PAMTD, over Excel spreadsheets, is that it is fully auditable and eliminates costly errors

Consolidations

Powerful ledger data aggregation

Saves on time by automating the consolidations process for multi-company enterprises. Consolidations handles extensive ownership models and will fit your corporate structure. It supports multi-currency conversions, provides for intercompany eliminations and produces a detailed audit trail on completion.

Spend Control

Complete visibility over your Spend.

iPOS eProcurement

Powerful end to end Spend Control

A web-based, end to end, browser delivered procure to pay solution. iPOS drives down maverick purchasing, controls spend across the organisation, manages extensive approval delegates and workflow requirements and delivers comprehensive transparency and auditability to the organisation.

iPOS includes a number of optional components such as Contracts, Mobile Approvals as well as those listed below. The dashboard delivers spend visibility to all stakeholders in the purchase lifecycle in a simple and friendly UI.

Fully integrated, not interfaced, to Infor SunSystems guaranteeing data truth and accuracy as well as real time reporting.

Punchout

Dynamically purchase from a supplier's website from within iPOS without the need to enter the information into iPOS.

Matching and reconciling supplier invoices to your POs is a time consuming task. A lot of time and effort can be wasted in properly managing the supplier catalogues within your procurement system. Failing to keep these up to date can introduce pricing and other errors in the PO which cause unnecessary time, cost and effort to correct.

In iPOS, purchasers can move from one punch out site to another and transfer all shopping baskets into a single requisition for normal processing resulting in significant time saving.

iPOS XL

Fast excel add in for iPOS

Excel add-in for iPOS requisitions and invoices. Organisations often have large and complex requisitions that they place on a regular basis. Excel is best placed to deal with these quick bulk changes and manage any calculations and checks that are external to the normal procurement process. This iPOS-aware Excel add-in allows people to enter, validate and submit requisitions from a spreadsheet. It also provides fast and adaptable ways to access iPOS data. Enables production and distribution of structured management reporting around your procurement data.

Expenses

Powerful web based expenses

Expenses is a web-based expense management solution that delivers immediate payback in terms of time and cost of processing. It delivers certainty and control in an area that frequently leaks time and effort and is often riddled by inaccuracy and error prone manual activities. Expenses removes the overhead of time and cost of a manual claim.

Process Automation

Automation can save time and money and preclude human error. Our Process Automation suite comprises; PA eSign (electronic signatures), PA Intelligent Invoice Capture (reads invoices using AI that ensures fast invoice data capture and greater accuracy with use) and PA Streams (data extraction and manipulation).

PA eSign

Fast, secure Electronic Signatures

Signing documents through an electronic service brings compliance, speed, transparency and confidence to the process from end to end. PA eSign can quickly and safely process single ad-hoc documents and more complex multi-party documents at a cost-effective price.

PA Intelligent Invoice Capture

Sophisticated AI Invoice Automation

PA Intelligent Invoice Capture uses artificial intelligence which learns over time to improve its understanding of the data found in an invoice, like a human. This offers much higher accuracy levels than historical template based systems. You benefit by getting better visibility into cash, faster processing cycle times, and on-time payment.

Operational Intelligence & Systems Integration

Detect and Respond To Critical Events with XMPro's Application Development Platform. PA Streams makes the complex, simple, to resolve multi-source data integration issues.

XMPro

Digital Business Platform

XMPro allows the big data and events around your business to be understood, filtered for business relevance and then used to trigger the right outcomes from the right system or team in real time.

PA Streams

Intelligent integration

Integrate data to provide real time analytics and situationally aware process management automation to transform your business.

PA Streams extracts, transforms and uploads to a destination system quickly and easily.

“The Professional Advantage portfolio is integral to our Infor SunSystems implementation. Solutions that I put in place some 8 years ago are still working well today and we have not had to revisit or replace any of them.”
