PA STREAMS

Operational Intelligence & Integration for the Hospitality Sector

Simplifying Complexity

In today's digital landscape, navigating a multitude of data sources, applications, and business systems can feel like piecing together a complex puzzle. Unfortunately, many of these elements operate in silos, creating barriers to efficiency and data integrity. Custom integrations often prove to be daunting endeavours, draining both resources and patience, leaving hospitality professionals grappling with data quality issues that hinder operational excellence.

Enter PA Streams - simplifying integration across hospitality systems and providing insights into business events. Our intuitive visual interface empowers seamless process flows, delivering real-time insights and actionable intelligence with ease. Whether you're struggling with Cloud to Cloud and hybrid integration or looking for a supportable and scalable backbone for your business, our solution can meet your requirements.

With PA Streams, the arduous task of extracting and mapping data becomes a thing of the past. Remove manual rework and introduce streamlined processes that elevate your business outcomes and enhance guest satisfaction.

Whether you're wrestling with data discrepancies stemming from human error or struggling to harmonise disparate data formats and transaction cycles, PA Streams is your solution. Experience the power to optimise processes, elevate data accuracy, and drive informed decision-making with confidence.

More than just an integration platform

Unlock the full potential of your data with PA Streams, a single integrated suite of cutting-edge real-time integration and data management tools. Our platform empowers your organisation with real-time insights, recommendations, and automated actions, creating a Common Operating Picture that spans strategic, tactical, and operational levels.

Transform your Business Operations with Real-Time Data.

PA Streams's Intelligent Business Operations Suite incorporates Event Intelligence to improve how businesses manage and respond to real-time data. This technology enables more effective decision-making and operational responsiveness.

Common Issues

Inefficient Operational Decision-Making
Traditional operations often rely on manual monitoring and decision-making processes, which can be slow, error-prone, and inefficient. PA Streams addresses this by providing a platform for real-time, data-driven decision-making, significantly enhancing operational efficiency and accuracy.

Lack of Real-Time Data Utilisation
The Hospitality sector, like many others, struggle to leverage the vast amounts of data they generate effectively from multiple sources. PA Streams solves this by integrating real-time operational data with its platform, providing actionable insights via recommendations and application web pages.

Multiple Sources of Data
Having multiple data sources, across different environments, is complex and hard to manage. PA Streams connects your cloud and on-premise applications and data sources in a simple, secure and single platform with a library of click and drop connectors available for various applications.

Customisation and Scalability Concerns
PA Streams offers "low code, no code" configurable and scalable solutions, ensuring that each you get a platform that fits your unique operational demands.

Keeping Up with Technological Advancements
The rapid pace of technological change in operations can be overwhelming. PA Streams addresses this by offering a cutting-edge solution that keeps businesses at the forefront of innovation.

Comprehensive Operational Insight
With real-time digital dashboards, businesses gain an unprecedented level of visibility and control over their operations, leading to informed and strategic decision-making.

AI-Enhanced Decision Support
PA Streams offers business rule based data analysis, but also offers an accelerator in to the use of AI models with simple to use connectors supporting multiple models. This feature navigates complex scenarios, significantly enhancing the accuracy of decisions and leading operations toward peak efficiency and effectiveness including sensor enabled assets (doors, locks, etc.)

Example Use Cases
Integrations
- Opera PMS
- STR (Smith Travel Report)
- Avalara Global Tax
- Concur
- SalesForce
- Birchstreet
- Vendors, invoices and more
- Futurelog

Event Monitoring
Fraud Prevention Alerting/Dashboard (Simphony POS) for covers

Labour & Assets
- Employee Time clock
- Laundry monitoring

Talk to us

Don't let technical hurdles and data quality woes impede your progress. PA Streams is your gateway to seamlessly connecting data sources, applications, and business systems, delivering continuous real-time intelligence and transforming your hospitality operations. Ready to embark on this journey?
